

Task 5 – Cloud Data Management

1 Google Fusion Tables

Google Fusion Tables is a cloud service for data management. Users can store, share, query, and visualize data tables. The query endpoint allows users to manage data rows (insert/update/delete), and query the table for all rows that match spatial or data conditions. The results of queries can be CSV or JSON, or used in the Google Maps API or Google Visualization API.

Action Items

- **Peruse:** Fusion Tables.
<https://developers.google.com/fusiontables/>
- **Read:** Getting Started.
https://developers.google.com/fusiontables/docs/v2/getting_started
- **Peruse:** Using the API.
